RESIN MB-6100 extra

Mixed bed resin ready to use for the production of demineralized water of excellent quality

- Anion / cation ratio: 50 : 50
- Thanks to the fast exchange kinetics, it guarantees unparalleled performance on all wire edm machines, keeping under control the resistivity of the circulating water
- Can treat both tap water and water already partially demineralized with other systems (reverse osmosis systems / electro-deionizers / multi stage evaporation)
- Thanks to its long life ensures an economic advantage.
- Supplied in 25lt bags. or in cylinders of 32.5lt. complete with connections and ready to use.

Bead size (mm)	Water retention (% max)	Uniformity coefficient	Shipping weight (g / L)
0.30 ÷ 1.20	65	1.70 max.	720 ÷ 750

ATTENTION:

The resin must be kept before use, in the hermetically sealed original packaging, in order to prevent it from coming into contact with the air and undergoing a degradation of its initial performance due to carbonation phenomena of the anionic component.

It is therefore necessary to handle it with caution, avoiding to leave the packages open.
