RESIN MI-700

Mixed bed resin ready to use for the production of high purity demineralised water.

- Anion / cation ratio: 60 : 40
- High capacity and excellent exchange kinetics. High mechanical stability.
- It can treat both tap water and water already partially demineralized with other systems (reverse osmosis systems / electro-deionizers / multi stage evaporation).
- Supplied in 25lt bags.

Bead size (mm)	Water retention (% max)	Uniformity coefficient	Shipping weight (g / L)
0.425 ÷ 1.18	n.a.	1,60 max.	670 ÷ 770

ATTENTION:

The resin must be kept before use, in the hermetically sealed original packaging, in order to prevent it from coming into contact with the air and undergoing a degradation of its initial performance due to carbonation phenomena of the anionic component.

It is therefore necessary to handle it with caution, avoiding to leave the packages open.
