RESIN MX-700

Mixed bed resin ready to use for the production of demineralized water, it guarantees a constant output with very low conductivity.

- Anion / cation ratio: 50 : 50
- Excellent resistance to mechanical degradation ensures a low pressure drop
- Offers a dispersion of conductivity <math><0.1\text{ mS / cm}</math> and is usable for all mixed bed applications
- Supplied in 25lt bags. or in cylinders of 32.5lt. complete with connections and ready to use

Bead size (mm)	Water retention (% max)	Uniformity coefficient	Shipping weight (g / L)
0,45 ÷ 1,20	45 / 55	nd	730

ATTENTION:

The resin must be kept before use, in the hermetically sealed original packaging, in order to prevent it from coming into contact with the air and undergoing a degradation of its initial performance due to carbonation phenomena of the anionic component.

It is therefore necessary to handle it with caution, avoiding to leave the packages open.
